
Offline candidate evaluation and policy construction
Input page
Optional contour suppression
Fixed candidate pool (50 settings)
Extract page features once
Run OCR pipeline on fixed pool
→ CER labels (×50)
Training tuples:
page features + candidate parameters + CER labels
Training artifacts:
Surrogate model + FixedTopK list + NN training pages
Output selector trained offline on labeled training shortlists
Inference-time shortlist construction under a fixed OCR budget
New input page
Optional contour suppression
Fixed candidate pool (50 settings)
Page features + candidate parameters
Apply shortlist policy
Surrogate, FixedTopK, NN-K, Random
Top-K shortlist
Evaluation and oracle-free output selection
Best-of-K evaluation
OCR on K candidates
Select lowest-CER output
using reference text
Shortlist-quality metric; not oracle-free deployment
Oracle-free selector
on surrogate top-3
Choose one OCR output
without reference at inference
Uses surrogate top-3; no reference text
